Stina Nilsson (SWE)

ELITE3.0 Our boots have crossed finish lines and crowned champions. These achievements humble us, and we strive to transfer winning experience into every product we design. Discover the winner in you and join the Alpinia family.

 **alpinia**
alpinasports.com

FOR SKIING ONLY

This boot was designed to be the ultimate XC racing ski boot. • The boot is designed for maximum skiing performance. • We use carbon parts, which have been shaped to create the perfect balance between performance and fit. • Carbon adds stiffness and support where it's most needed, and is extremely lightweight – but needs special care, particularly when not out on the trails.

WHEN NOT ON THE TRAIL, ALWAYS USE OVERSHOES

Always use the boots together with the overshoes when not skiing. • Direct contact with concrete, asphalt, ice, sand, rock, stairs and any sharp objects can damage, even break the carbon outsole.

DO NOT BEND OR TWIST THE BOOT BY HAND

Never bend or twist the boots by hand. • Extreme bending or twisting of an empty boot (as shown in the figure) can result in damage, even breakage of the carbon elements. • Always put the boot on to get a feel for its remarkable flex characteristics.

DO NOT KNOCK THE BOOTS TOGETHER

Before stepping into the ski binding, clean the carbon sole carefully, by hand. • Similarly, clean the snow and dirt from the sole cleats by hand or with a ski pole. • Do not tap or knock the boots against each other or any other hard or sharp surfaces.

TRANSPORT BOOTS WITH CARE

During transport, always make sure not to place heavy bags or other heavy objects on top of the boots. • This could damage the carbon cuff or the carbon outsole.

HELPFUL HINTS FOR PROPER USE AND CARE

TREAT YOUR BOOTS WITH CARE

Clean boots with a soft, moist cloth or soft brush and water. • Never use chemical cleaning agents nor wash in a machine.

FOR LONGER PRODUCT LIFE

Boots should be cleaned on a regular basis. • Boots should be dried after each use to prevent the build-up of odours.

DRYING THE BOOTS

Dry at room temperature, without the aid of an external heat source. • Stuff boots with old newsprint; place at a safe distance from a mild source of heat – never in direct contact with any heat source; remove wet newsprint and repeat.

CHALLENGE. EVERY DAY.

NEW CHALLENGES ARISE EVERY DAY. THOSE THAT DARE TO FACE THEM WILL BE CROWNED CHAMPIONS. AT ALPINA, WE BELIEVE IN GREATNESS, AND WE STRIVE TO PRODUCE ONLY THE BEST SPORTS EQUIPMENT FOR EVERYONE. MANY PROFESSIONAL ATHLETES PUT THEIR TRUST IN OUR CRAFTSMANSHIP AND TRADITION. WE DON'T TAKE THAT FOR GRANTED. LIKE THEM, WE TRY TO OVERCOME EVERY CHALLENGE THROWN OUR WAY. WE DO IT ALL WITH PASSION, PASSION FOR THE SPORT, FOR THE CHALLENGES THAT LIE AHEAD, FOR GREATNESS.

MOVING MOUNTAINS IS NOT EASY, AND CROSSING THE FINISH LINES FIRST IS A RARE PRIVILEGE. A LOT OF HARD WORK AND DEDICATION IS REQUIRED TO COMPETE AT THE HIGHEST LEVEL. BUT ONLY ATHLETES KNOW FOR SURE WHAT IT TAKES, SO WE ASKED THEM FOR ANSWERS.

Hanna Falk (SWE)

What makes you want to put on your boots and go? I just love to ski! I do it with joy, freedom, and hope to be a stronger and better skier for every day I practice.

How does proper footwear affect your performance? When the footwear feels perfect, I get maximum power in every movement of skiing. That is a great feeling!

What is needed to be the best? It takes a lot of input, effort and patience to be the best.

How do you deal with setbacks? After each setback, I feel a little fire inside me. That fire helps me to do better and try to get a second chance.

Who or what inspires you? My grandfather inspires me a lot. He is a wise man with a lot of stubborn and patience.

Charlotte Kalla (SWE)

What makes you put on your boots and go? My ambition to reach my goals. I am curious to see how fast I can ski and where my limits are.

How does proper footwear influence your performance? It make it possible to get the power in the right direction in every stride.

What does it take to be the best? As little negotiation as possible. Just do it and put your energy in things you have influence over. Follow your plan.

How do you deal with setbacks? I try to talk about my feelings and thoughts together with the people I trust.

Who or what inspires you? The girls in Swedens XC-ski team.

Evgeniy Belov (RUS)

What makes you put on your boots and go? My parents taught me how to ski from a kindergarten, and since then I have loved this activity. Doing it comfortably in double is more pleasant.

Why do you do it? I really like that

How does proper footwear influence your performance? Sports equipment is very important for high results. They should combine legs and skis in one piece. In Alpina boots I have complete control. I can handle the skis like my fingers.

What does it take to be the best? It is necessary to try to be better in everything and to leave the comfort zone.

How do you deal with setbacks? It makes me reflect on my decisions and motivates me to be better.

ANATOMY OF INNOVATION

CHASSIS

ONE-PIECE CHASSIS

CLASSIC ACTIVE EDGE WITH ALPINA SSR CLASSIC SOLE

Extremely light anatomic and ergonomic carbon-made Active Edge & soft flex chassis construction with directly integrated TPU-made NNN compatible toe & heel plate. One-piece chassis construction provides maximum longitudinal stiffness and stability, superior responsiveness and power transmission by the foot to the ski, with free heel & adaptable heel pocket construction for minimum heel stress and optimal fit.

SKATE ACTIVE EDGE WITH ALPINA SSR SKATE SOLE

Extremely light anatomic and ergonomic carbon-made Active Edge & hard flex single-piece chassis construction with integrated TPU-made NNN compatible toe & heel plate. Chassis provides maximum longitudinal stiffness and lateral stability, superior responsiveness and power transmission by the foot to the ski, with adaptable heel pocket for optimal foot and ankle fit.

SOLES

All Alpina XC boot soles are NNN compatible. Sole type and construction are chosen individually for each boot based on boot features and functional requirements.

NEW ALPINA SOLE

A novelty in our family. It is a two component sole made to match all binding systems except SNS. The stiff chassis offers stability and the soft cleats are made for easier walking. The gluing surface is optimized to match the Alpina lasts which provides better stability on any terrain and improves the stance position. The sole is fitted on skate and classic style boots alike.

NNN T4 / NNN T3

TPU-made sole with good power transmission, softer, more comfortable flex and good walkability.

NNN BC

Sole with optimum support in difficult terrain; reliable walking thanks to non-slip profile.

VIBRAM 75MM

Standard Vibram 75 mm sole; provides excellent support in difficult terrain; non-slip profile with specially made rubber mixture.

NON-PVC

No PVC materials were used during the production process and are not included in the boot's construction. In place, more environment-friendly materials have been introduced into production, making the boot warmer and increasing its breathability.

HEEL COUNTERS

FULL CARBON ACTIVE EDGE

Extremely light. Improves the torsional stability of the boot and provides excellent grip and foothold in the heel. With its Active Edge construction adopts to various types of heel and heel shapes.

CARBON + TPU

Carbon stabilizer provides torsional and heel counter stability inside and out; in combination with TPU adapts to various types of heel shape. All combine to deliver excellent grip and foothold.

INJECTED CARBON

Carbon fibre particles and PU materials infused into exterior boot construction reduce the weight of the boot, consequently increasing the functionality. Injected carbon active edge is strong and durable. It ensures better torsional stability, improved stance position and good grip for any heel or heel shape.

TPU

The TPU heel counter provides good grip, stable foothold in the heel, prevents heel movement, and adapts to various foot shapes and heel volumes.

FLEX

The skate technique demands a hard flex sole, while the classic technique requires soft flex sole characteristics in the shoes metatarsal area. The Skate design also employs stiff flex component parts and materials, while both the Classic and Combi type shoe design employ specifically soft flex component parts and materials that deliver maximum power and control. Back Country employs a medium flex sole and components to deliver a more flexible, accommodating ski experience.

FIT

The design and shape of the internal 'soft' part of the shoe provides optimum grip, the narrow Race cut to the wider Comfort fit; the range is rounded out with the medium Dynamic fit that falls between the two extremes. All fit configurations take into consideration higher and lower variations in foot form.

OUTER SHOE

CUFFS

The skating technique requires more lateral ankle support for improved performance. So the boot has an externally fixed cuff, which provides rigidity and lateral stability to the ankle, to gain better responsiveness with optimal grip. Cuffs are made of carbon (which are extremely lightweight) or plastic. All are anatomically and ergonomically designed, employ a 'Velcro' power strap (some with EVA-padding) and are attached to the heel counter with rivets or screws.

FULL CARBON

The anatomic full carbon cuff is extremely light and delivers maximal stiffness and superior lateral responsiveness. EVA-padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

CARBON

A light anatomic carbon cuff delivering exceptional stiffness, lateral stability and responsiveness.

Equipped with a power strap for optimal ankle fit, superior comfort and adjustable ankle grip.

INJECTED CARBON

Carbon fibre particles and PU materials infused into exterior boot construction reduce the weight, consequently increasing the functionality and durability of the boot. Injected carbon cuffs take a firm hold of the ankle. They ensure better longitudinal stability and improved stance position while maintaining comfort.

TPU SKATE

Thermoplastic polyurethane provides good stiffness and lateral stability, while the power strap provides superior comfort and adjustable ankle grip.

TPU COMBI

The COMBI boot is designed for the classic technique. It has a softer flex sole, and is equipped with a cuff that provides less experienced skiers with more lateral support and stability to the ankle, and can be adjusted to the desired level of comfort.

GAITERS

One-piece seamless gaiters cover the shoe and lower leg completely. Gaiters are water-tight, with a water-tight zipper and elastic, and protect against cold, water, moisture and snow. And the boot instep is adaptable to different foot shapes.

PVC NEOPRENE

PVC is strong and lightweight, soft and flexible, and highly durable, while neoprene maintains good flexibility over a wide temperature range and offers good insulation against both wet and cold.

4DRY PVC 4DRY WEAVE

4DRY stands for an innovative system made from bielastic PES textile material that allows the boot to breathe. It is laminated with a membrane where needed and designed with sublimation print for better abrasion. The material feels light on foot and is hydrophobic, whisking away the moisture, ensuring a dry and relaxed foot.

ELASTIC INSERT

For gaiter adaptability to various lower leg shapes.

INNER SHOE

LACING

45°

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique.

ANATOMIC FOOTBED

Insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improves the thermal insulation of the shoe.

ALPITEX MEMBRANE

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. Even under extremely cold and high-humidity conditions it provides the foot with maximum thermal comfort.

CHALLENGE. EVERY DAY.

the weather

Charlotte Kalla

Breatheable premium upper. For the first time in the world of racing, the circulation of air enables your foot to remain dry and keep your power kick at maximum. On the critical parts of the boot for the high performance, where breatheable upper meets the carbon sole, a thin layer of special membrane is placed to prevent any possible water invading.

 **alpina**
alpinasports.com

ELITE 3.0

ULTRA LIGHT CARBON CONSTRUCTION,
ULTRA HIGH PERFORMANCE

The world's lightest, most responsive ski boots are changing the way we ski – and win.

TORSIONAL STABILITY

ESK 3.0

The single-piece all-carbon anatomic 'Active Edge' skate chassis features extremely light, 'hard' sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability. Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

ECL 3.0

An extremely light anatomic, single-piece carbon chassis with pliable sole flex and adaptable heel pocket delivers maximum longitudinal stability and superior responsiveness and power transmission. As a result the skier maintains correct body posture and effective equilibrium body position while running.

FREE HEEL

Free Heel construction virtually eliminates heel stress, providing the skier maximum comfort.

ACTIVE EDGE

Active Edge consists of a special sandwich of inner and outer carbon textile layers combined around a rubber mid-layer for maximum chassis adaptability to various types of heels and heel shapes together with maximum power and total control.

A mere second can separate losers from champions. For that winning edge, we designed the new ELITE 3.0 SKATE. Lighter than its predecessors, it offers the best weight to functionality ratio of any boot currently on the market. Built firmly with full carbon cuffing and carbon active edge resting upon an anatomic footbed, this boot holds a tight grip on the foot, supporting it laterally and torsionally even on steeper terrain and through sharp turns.

- ACTIVE EDGE CARBON WITH ALPINA SSR CLASSIC SOLE
- 4DRY
- ANATOMIC FOOTBED
- NON PVC

This boot was made to bring out your best. We equipped it with full carbon cuffs, carbon active edge, 4DRY, and made the interior lining from non-PVC materials. It's also slimmer and lighter than ever with an even greater fit and reinforced torsional stability. Let your foot breathe as you reach for greatness!

CLASSIC AS

Ankle support (or AS) is a special design of the boot that provides greater lateral stability in the classic technique. For amateurs or those just starting to run this type of design will assist significantly when trying to overstep or turn sharp corners. They are equipped with a shell around the ankle for a tighter grip, working as a set of training wheels, preventing the skier from falling.

DOUBLE POLING DP

Double poling (or DP) is a special running technique where most of the work is done by arms. The competitors run by pulling their weight on ski poles, while the feet move ever so slightly in an up-and-down motion. The boot is specially designed to suit the needs of this technique. The sole is made from a compact hard and soft flex so that it bends where needed and ensures stability otherwise. For better posture and functionality the heel is slightly raised.

CHALLENGE. EVERY DAY.
the future

***We promised to innovate.
We promised to be better.
Now we delivered.***

We take our natural responsibility seriously. This year we introduced two new outstanding technologies in the production of our Competition boots. Injected carbon is a unique invention where strong carbon fibers are infused into more flexible materials, ensuring a robust and lightweight boot at a fraction of the cost. We also begun developing a range of our products without the use of PVC materials and replacing them with more eco-friendly solutions - a kinder production cycle and products with a mission. Because we care about our planet and we like to keep the promises we make.

SKIS + POLES

SKIS

FEATURES

ULTRA LIGHT WOOD CORE

A laminated high quality wood core with air channels saves weight, increases durability, and improves pressure distribution

ULTRA LIGHT WOOD CORE EDGE

Wood core with all the characteristics of the ultra-light wood core designed to ideally suit steel edge skis

SS810 PE BASE

PE base material ideally suited to the Sollte pattern for superior waxless performance

HM GRAPHITE BASE

Graphite base with high molecular weight contains wax-based additives ensuring good glide. This base requires regular application of glide wax; ideally every day you ski

PE BASE

Developed to suit the needs of occasional skiers requiring little to no maintenance

MULTIGRIP EMBOSSED BASE

A combination of various grip technologies for efficient power transfer and optimum glide

SOLLTE GRIP BASE

Developed for better climbing and gliding in all snow conditions and ideally suited to backcountry skis

SKIN TECH BASE

Made of 65% mohair and 35% nylon Alpina's Skin Tech base delivers the perfect balance of glide and grip in virtually all conditions. No special maintenance is required and skin segments are easily exchangeable.

STEEL EDGE

Steel edges significantly extend the ski life and greatly increase control in icy and ungroomed conditions especially when descending.

POLES

FEATURES

XC COMFORT STRAP

New -- Biathlon style, easy adjustable loop.

TEXTILE STRAP

Strong adjustable strap delivers comfort and weight distribution around the wrist.

CORK GRIP

Ergonomic natural cork grip for warmth and feel.

PE GRIP

Dual material ergonomic grip with soft foam for greater warmth.

ALUMINUM 7075

Our shafts, made of aircraft quality Aluminum alloy 7075 are strengthened and tempered, for maximum quality, and lasting durability.

ALUMINUM 5083

Our shafts made with Aluminum alloy 5083 are made in Italy and each tube is checked by our exacting robots and our technicians to ensure the highest quality

XC CARBIDE TIP

Carbide tip for lasting performance

STEEL TIP

Steel tip for value and durability

XC TOURING BASKET

Good support and grip both on and off track

XC BC BASKET

Greater surface area for deeper softer snow conditions and a carbide tip for durability and grip when icy
