CHALLENGE. EVERY DAY.
the innovation

**The perfect
package**

At Alpina, we always follow trends and pave the way for new technologies that enable us to develop products that are at the very top of the world in terms of quality and functionality.

 **alpina**
alpinasports.com

FOR SKIING ONLY

This boot was designed to be the ultimate XC racing ski boot.

- The boot is designed for maximum skiing performance.
- We use carbon parts, which have been shaped to create the perfect balance between performance and fit.
- Carbon adds stiffness and support where it's most needed, and is extremely lightweight – but needs special care, particularly when not out on the trails.

WHEN NOT ON THE TRAIL, ALWAYS USE OVERSHOES

Always use the boots together with the overshoes when not skiing.

- Direct contact with concrete, asphalt, ice, sand, rock, stairs and any sharp objects can damage, even break the carbon outsole.

DO NOT BEND OR TWIST THE BOOT BY HAND

Never bend or twist the boots by hand.

- Extreme bending or twisting of an empty boot (as shown in the figure) can result in damage, even breakage of the carbon elements.
- Always put the boot on to get a feel for its remarkable flex characteristics.

DO NOT KNOCK THE BOOTS TOGETHER

Before stepping into the ski binding, clean the carbon sole carefully, by hand.

- Similarly, clean the snow and dirt from the sole cleats by hand or with a ski pole.
- Do not tap or knock the boots against each other or any other hard or sharp surfaces.

TRANSPORT BOOTS WITH CARE

During transport, always make sure not to place heavy bags or other heavy objects on top of the boots.

- This could damage the carbon cuff or the carbon outsole.

HELPFUL HINTS FOR PROPER USE AND CARE

TREAT YOUR BOOTS WITH CARE

Clean boots with a soft, moist cloth or soft brush and water. Never use chemical cleaning agents nor wash in a machine.

FOR LONGER PRODUCT LIFE

Boots should be cleaned on a regular basis. Boots should be dried after each use to prevent the build-up of odours.

DRYING THE BOOTS

Dry at room temperature, without the aid of an external heat source. Stuff boots with old newsprint; place at a safe distance from a mild source of heat – never in direct contact with any heat source; remove wet newsprint and repeat.

ANATOMY AND INNOVATION

XC BOOT TECHNOLOGY

CONSTRUCTION

We have developed many ways of making boots for different segments of cross-country skiing. The differences between World Cup competitors' and recreational users' needs and wishes are significant, so it is necessary to adapt the shoe to each segment. World Cup competitors need extreme lightness and breathability of the shoe, while back-country explorers need warmth and a high level of stability. In all the different segments throughout the manufacturing process, we use the knowledge that ultimately provides the best results to every user of our boots.

RACING ELITE

The shoe is constructed with one-piece full-carbon chassis and a full-carbon cuff. All of the boots are made in SLOVENIJA. The split racing sole tip and heel are fully integrated into the chassis of the shoe. It has an anatomic ultra lightweight and racy inner shoe, combined with a breathable ultralight gaiter. At the end of the process, the shoe is wrapped in special TPU foil that will prevent the water from coming into the shoe but will allow a high level of breathability for top racing performance.

RACING SOLE

Our PRO, Comp, and Racing line are constructed on the sole rather than chassis like Elite 3.0 line. All the boots are equipped with our in-house-made ALPINA Soles, which will give you the whole package of ALPINA performance. Outer complex materials differ from Full-carbon to TPU and are chosen to provide the best performances with similar technologies at different price points.

BC BOOTIE PRO

Full bootie construction of the boot ensures your feet are 360° surrounded with breathable waterproof materials and isolated for cold days. In the first phase of production, the so-called sock is produced and later united with the rest of the boot components to ensure the highest level of fit and performance.

BC PRIME

Full bootie construction of the boot ensures your feet are 360° surrounded with breathable waterproof materials and isolated for cold days. In the first phase of production, the so-called sock is produced and later united with the rest of the boot components to ensure the highest level of fit and performance.

TOURING PRIME

All TOURING shoes use Alpina Touring PRIME construction and combine Alpina or Roteffela outer soles. The specific of this glued construction is great comfort and isolation throughout everyday use while staying price-performance oriented.

ALPINA'S FREE-FEET TECHNOLOGY

Research and testing have shown us that feet move in a specific way while practicing cross-country skiing, and our boots can help you with that. Alpina's "Free-Feet" technology virtually eliminates foot stress, providing the skier maximum comfort and performance. This is accomplished with a unique design and manufacturing process to give your feet freedom and all the support you need at any given moment.

OUTSOLES

ACTIVE GRIP

The 10mm offset of the front metal bar part of the Alpina PRO CLASSIC sole will enable you to get more out of every kick you make. No matter what, you will enjoy classic technique more than ever with Alpina Active GRIP technology.

OUTSOLES

Outsole type and construction are chosen individually for each boot based on its features and functional requirements. We have used years of experience and knowledge from our R&D department and years of collaboration with World cup athletes to develop Alpina outsoles for both Skate and Classic techniques with specific characteristics. We are happy to choose the best options for every shoe.

ALPINA ELITE CLASSIC CHASSIS with integrated split Classic sole

Material Chassis: FULL CARBON

Material Sole: TPU

Extremely light anatomic and ergonomic single-piece carbon-made soft, pliable sole flex chassis construction with directly integrated NNN compatible Classic toe & heel plate. The chassis construction provides maximum longitudinal stability, superior responsiveness, and power transmission by the foot to the ski, with "FREE-FEET" & adaptable heel pocket construction for minimum heel stress and optimal foot fit.

ALPINA ELITE SKATE ONE-PIECE FULL CARBON with integrated split Skate sole

Material Chassis: FULL CARBON

Material Sole: TPU

Extremely light anatomic and ergonomic single-piece carbon-made stiff sole flex chassis construction with integrated NNN compatible Skate toe & heel plate. The chassis provides maximum longitudinal stiffness and lateral stability, superior lateral responsiveness, and power transmission by foot to the ski, with "FREE-FEET" & adaptable heel pocket construction for minimum heel stress and for optimal foot and ankle fit.

ALPINA PRO CLASSIC

Material: Carbon + pebax insert and TPU

New Special-made outsole for classic technique. The pivot point, NNN compatible, moved for 10 mm to the front direction for better and more efficient thrust. Improved ski-to-snow contact. Thin layer design for the lightness of the sole; with low cut heel cleats construction and 90-degree oriented front cleats design for optimal sole, soft flex characteristic.

ALPINA PRO SKATE

Material: Carbon + pebax insert and TPU

New Special-made outsole for skate running technique. A thin layer design offers the lightness of the sole, with high cut heel cleats construction and 45-degree oriented front cleats design for optimal sole stiff flex characteristic. The pivot point, NNN compatible, slightly moved to the back directly under the big toe to support a more efficient and decisive thrust.

ALPINA PULSE

Material: TPU

Pulse soles are made to match NNN binding system. Provides good stability and stance position both on skate and classic style boots.

ROTTEFELLA T4

Material: TPU

T4 sole offers good power transmission, comfortable, softer flex, and good walkability.

BC XPLORE

Material: TPU and Rubber Sole

The Rottefella Xplore™ Backcountry sole is anti-skid, flexible, and stable. The rotation point is moved backward as close to the foot as possible for better mobility and comfort, giving a more natural walking feeling.

ROTTEFELLA BC

Material: TPU

Backcountry NNN compatible sole with optimum support in rugged terrain; reliable walking thanks to non-slip profile.

75 MM

Material: TPU

Standard 75 mm sole; provides excellent support in rugged terrain; non-slip profile with specially made rubber mixture. Tourer free 75 and Alaska 75 use Vibram brand soles.

FLEX

The skating technique demands a stiff flex sole, while the classic technique requires soft flex sole characteristics in the shoe metatarsal area. The Skate design also employs stiff flex parts and materials. In contrast, the Classic and Combi/Duathlon type shoe designs employ soft flex parts and materials that deliver maximum power and control. Backcountry and Double poling (DP) shoes employ a medium flex sole and components to deliver a more flexible, accommodating ski experience.

MIDSOLES

With midsoles, we are defining the shoe's flex, feel and power characteristics. Midsoles give you the power to reach the speed while staying stable. They can give you the extra feel when running classic technique in challenging snow conditions or the power while sprinting for first place. Various materials and shapes of midsoles are used to find the perfect characteristics we are looking for in every shoe.

	MATERIAL	STIFFNES	WEIGHT
ALPINA ELITE SKATE	Carbon and PEBAX (World cup Technology)	HARD	ULTRA LIGHTWEIGHT
ALPINA ELITE CLASSIC	TPD (World cup Technology)	SOFT	ULTRA LIGHTWEIGHT
ALPINA PRO CLASSIC	Carbon and PEBAX	SOFT	ULTRA LIGHTWEIGHT
ALPINA TEMPO SKATE	Glass fibers and TPU	HARD	LIGHTWEIGHT
ALPINA TEMPO CLASSIC	TPD	SOFT	LIGHTWEIGHT
ALPINA JR TOURING	TPD	ULTRA SOFT	LIGHTWEIGHT
ALPINA JR RACING SKATE	TPD	MEDIUM	LIGHTWEIGHT
ALPINA JR RACING CLASSIC	TPD	SOFT	LIGHTWEIGHT

ANATOMY AND INNOVATION

INNER SHOE

FIT

The design and shape of the internal 'soft' part of the shoe provide optimum grip. The narrow Race cut to the broader Comfort fit, and; the range is rounded out with the Dynamic medium fit that falls between two extremes. All fit configurations take into consideration higher and lower variations in foot form.

LACING

ALPINA DIAMOND LACING

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique. It also improves the torsional stability of the overall shoe and helps deliver power to the user.

ALPINA PRIME LACING

A braid angle of 90° relative to the longitudinal direction of the shoe provides maximum grip in the instep and ensures a tight fit between the boot and the heel when skiing the classical technique to the user.

FOOTBED

ALPINA ORTHOLITE

Alpina OrthoLite® insole technology creates a thermal barrier that elevates footwear temperature regulation to an unprecedented level, infusing open-cell PU foam with a proprietary aerogel creating the lightest, most advanced version of the world's most insulative material delivering unmatched thermal insulation and all-day comfort and cold weather protection underfoot.

ANATOMIC

Anatomic insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improving the thermal insulation of the shoe, and keeping your feet dry.

ALPITEX MEMBRANE

Material: PU Membrane

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions.

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. It provides the foot maximum thermal comfort even under icy and high-humidity conditions.

ALPINA IGLOO

Material: Felt

Advanced use of insulation provides the foot with maximum thermal comfort.

GAITERS

Gaiters cover the shoe and lower leg entirely and protect against cold, water, moisture, and snow. Gaiters are elastic and adaptable in shoe instep to different foot shapes. On the one hand, gaiters are water-tight but, on the other hand, also breathable in the instep area of the shoe.

ALPINA ELITE GAITER

Material: Polyester and TPU foil

Ultralight thin-layer elastic Polyester-made gaiters combine breathability and water tightness. It improves the lightness of the shoe. The inside side is equipped with thin PU foil to prevent water and moisture penetration and absorption, while the instep area is free of any foil to ensure breathability. Gaiters are equipped with elastic tape for gaiter adaptability to various leg shapes.

ALPINA PULSE GAITER

Material: PVC and Neoprene

Made out of PVC, it enables strength, lightweight, elasticity, and high durability, while NEOPRENE maintains good flexibility over a wide temperature range and offers good insulation against both water and temperatures.

ALPINA VARIO

The Elastic tape inserts on our high-end 2023/24 models for gaiter adaptability to various leg shapes.

ALPINA 4DRY

Material: Polyester and TPU Membrane

'4DRY' stands for an innovative system made from bi-elastic PES textile material laminated with a membrane that allows the boot water impermeable and allows it to breathe. The material feels light and is hydrophobic, whisking away water and moisture to maximize comfort and ensure a dry and warm foot.

HEEL COUNTERS

Heel counters made out of different types of materials used with "FREE-FEET" construction ensure optimal torsional stability of the boots and excellent grip and foothold for any heel volumes or foot shapes

ALPINA ELITE CLASSIC

Material: Full CARBON

Significantly lighter our most advanced WORLD CUP technology. It improves the torsional stability of the boot and provides excellent grip and foothold in the heel. The "FREE-FEET" construction reduces heel pressure and adapts to various types of heel and heel shapes.

ALPINA ELITE SKATE

Material: Full CARBON

Significantly lighter our most advanced WORLD CUP technology. It improves torsional stability and ankle support of the boot and provides excellent grip and foothold in the heel. The "FREE-FEET" construction reduces heel pressure and adapts to various types of heel and foot shapes.

ALPINA PRO

Material: Carbon and PEBAX

A perfect blend of the above materials is used on the exterior of the boot construction to reduce the weight of the boot, consequently increasing its functionality and durability of the boot. The PRO heel counter is solid and durable. It ensures better torsional stability and stance position.

ALPINA COMP

Material: Carbon and TPU

Premium thermoplastic polyurethane heel counter, with a high level of stiffness and low weight, provides a good grip and a stable foothold in the heel. 'Free heel' construction adapts to the various foot shapes and heel volumes.

ALPINA TEMPO

Material: TPU

Thermoplastic polyurethane heel counter provides a good grip and a stable foothold in the heel. 'Free heel' construction adapts to the various foot shapes and heel volumes.

ALPINA TERMO MOLDED

Material: PVC

The use of different thicknesses, densities, and shapes of PVC material, takes the shape of the foot and adapts to it with repeated use.

CUFFS

The skating technique requires more lateral ankle support for improved performance. So the boot has an external rivet or screw-fixed cuff, which provides rigidity and lateral stability to the ankle to gain better responsiveness with optimal grip. All cuffs are anatomically and ergonomically designed and employ a Velcro power strap and EVA padding.

ALPINA ELITE SKATE

Material: FULL CARBON

The anatomic cuff is exceptionally light and delivers maximal stiffness and superior lateral responsiveness. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

ALPINA PRO

Material: CARBON AND PEBAX

Materials allow exterior boot construction to reduce the weight of the boot, consequently increasing the functionality and durability of the boot. The PRO Cuff is solid and durable. It ensures better torsional stability and stance position.

ALPINA ELITE RS

Material: CARBON AND TPU

The anatomic cuff, developed and designed for the best roller-ski performance, is exceptionally light and delivers maximal stiffness and superior lateral responsiveness. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

ALPINA TEMPO

Material: TPU

Provides good stiffness and lateral stability, while the EVA padding and a power strap provide superior comfort and adjustable ankle grip.

CUFF SHAPES

The skating technique requires more lateral ankle support, while COMBI and shoes for double poling (DP) need just the right amount for improved performance. Due to those reasons, we have two upper cuff shapes so that we can meet the desires of every cross-country skier.

ALPINA COMBI

The Combi cuff shape is a bit lower, mid-cut construction, compared to the traditional skate cuff shape offering the right amount of support for different use of a shoe. It will help the skier feel stable at any given moment while giving you enough freedom for stress-free classic skiing techniques.

ALPINA SKATE

The traditional skate anatomic cuff, developed and designed for best performance, is light and delivers maximal stiffness and superior lateral responsiveness. This cuff provides the comfort and support you need for skating technique. The power strap ensures optimal ankle fit and adjustable ankle grip. EVA padding delivers superior comfort, while the power strap ensures optimal ankle fit and adjustable ankle grip.

CHALLENGE. EVERY DAY.

Elite 3.0

Our boots have crossed finish lines and crowned champions. These achievements humble us, and we strive to transfer winning experience into every product we design. Discover the winner in you and join the Alpinia family.

alpinasports.com

ELITE 3.0

ULTRA LIGHT CARBON CONSTRUCTION, ULTRA HIGH PERFORMANCE

The world's lightest, most responsive ski boots are changing the way we ski – and win.

TORSIONAL STABILITY

ESK 3.0

The single-piece all-carbon anatomic skate chassis features extremely light, 'hard' sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability. Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

ECL 3.0

An extremely light anatomic, single-piece carbon chassis with pliable sole flex and adaptable heel pocket delivers maximum longitudinal stability and superior responsiveness and power transmission. As a result the skier maintains correct body posture and effective equilibrium body position while running.

FREE FEET

Free Feet construction virtually eliminates heel stress, providing the skier maximum comfort.

A mere second can separate losers from champions. For that winning edge, we designed the new ELITE 3.0 SKATE. Lighter than its predecessors, it offers the best weight to functionality ratio of any boot currently on the market. Built firmly with full carbon cuffing and breathable gaiter resting upon an anatomic footbed, this boot holds a tight grip on the foot, supporting it laterally and torsionally even on steeper terrain and through sharp turns.

It's a good price-performance boot, ensuring some good skating at a desirable level of comfort.

POLES

FEATURES

EVOLUTION CLICK STRAP

Adjustable wide wrist strap offers great support in the wrist area and helps you to use all your upper body for moving forward.

XC COMFORT STRAP

Biathlon style, with easy adjustable loop.

TEXTILE STRAP

Strong adjustable strap is comfortable and enables weight distribution around the whole wrist.

CORK GRIP

Ergonomic cork grip is made of natural materials which enables better warmth generation and an optimal grip.

PE GRIP

Dual material ergonomic grip with soft foam for greater warmth.

ALUMINIUM 7075

Our shafts, made of aircraft quality Aluminium alloy 7075, are strengthened and tempered, to maximize the quality and improve the durability.

3K CARBON FIBER

Carbon fibres give the poles a classic carbon look. The extreme lightness and optimal stiffness of the poles are the characteristics everyone is looking for.

ALUMINIUM 5083

Our shafts Aluminium alloy 5083 are produced in Italy and each tube is checked by our robots and our technicians to ensure the highest possible quality.

CARBIDE TIP

Carbide tip ensures optimal long term performance.

STEEL TIP

Steel tip ensures durability.

XC TOURING BASKET

Good support and grip on and off the tracks.

XC BC BASKET

Greater impact surface for deep snow, equipped with a durable carbide tip for better grip in icy conditions.

NATURAL WALKING FEELING

It will make you doubt you are wearing ski boots. The rounded sole improves the rolling ability on every step you take.

NON-SLIP MATERIAL

Designed with superior materials and a pronounced profile, the ergonomic sole holds a perfect grip on any slippery surface.

INNOVATIVE SYSTEM

The sole is compatible with most bindings on the market, without the need for height adjustment. While the toe and heel pads can be replaced at any time.

Walking in ski boots can be a rather slippery affair on some surfaces but the new GripWalk sole and binding system turns a conventional ski boot into a real performance miracle. This is achieved by the excellent grip, rounded high profile soles and the GripWalk binding components perfectly tailored to them.

alpinasports.com

Strength, Versatility & Comfort

Height /Volume Adjustable Spoiler

A special element at the rear of the boot enables modification of the height / volume of the cuff.

Canting

The best skiers demand the perfect stance. Adjustable canting allows for the lateral alignment of the boot to be adapted to individual preferences, which enables the skier to develop perfect technique.

SKI/HIKE

Switching between ski- and walk-modes has never been simpler or easier – just insert the end of a ski pole, switch, and go.

Xframe

A rigid, lightweight structural frame connects the four main stress points and is reinforced on the most demanding axes, ensuring maximum strength and rigidity while reducing weight.

GRIP WALK

Designed with superior materials and a pronounced profile, the ergonomic sole holds a perfect grip on any slippery surface.

Easy entry system

Both the specially designed construction of the instep and the innovative Easy Entry system make boots simple to get on/off quickly and easily.

4DRY

4DRY liners provide breathability, drainage, ventilation and water resistance, keeping the foot warm, dry and comfortable.

Custom Fit

Alpina liners boast a number of key features that ensure a perfect balance between performance and comfort. Thermoformable foam ensures optimal fit in the sensitive ankle area, while the specially-designed foreliner adapts to the many variations in foot profiles.

Alpina's unique fully-integrated InTemp heating system keeps your feet comfortably warm at all times, but never overheated.

By swapping the specially designed Volume Control Plate between the left and the right boots you can adjust the boot volume for optimum fit.

INTEMP HEATING

fully integrated, fully energized

CHARGING

The boot's charging input is small, discrete, easily accessed and weather-proofed. Smart and simple – no need to disassemble the boot to charge.

BATTERY

Batteries are fully integrated inside the boot, and also easily changeable.

SMART CONTROL

Ready to use with the simple push of a button, the system runs at full-power for initial warm-up, then automatically returns to normal power, so feet are optimally warmed but never overheated.

ALPINA'S UNIQUE FULLY-INTEGRATED **INTEMP** HEATING SYSTEM KEEPS YOUR FEET COMFORTABLY **WARM AT ALL TIMES,** BUT NEVER OVERHEATED.

InTemp

We bid farewell to the cold days on the slope. The new InTemp heating technology ensures a warm embrace of the foot at a push of a button. Its easy access, smart charge, and discrete design will surely leave a comfortable and warm impression.

ELITE 120 HEAT

3X011
 size run **250, 255, ... 325**
 skier type **Advanced**
 color **Gray**
 shell **Polyether**
 cuff **Polyolefine**
 flex **120**
 last **100/102**

This boot cuts no corners! Constructed for better pressure transfer from the foot to the skis, it comes reinforced with the X frame and a tighter grip. The 4DRY lining system allows the foot to breathe while the rear spoiler can be adjusted to one's liking. The heated hard hitter will take your skiing to the next level!

ELITE 90

3X021
 size run **250, 255, ... 325**
 skier type **Advanced**
 color **Petrolio**
 shell **Polyolefine**
 cuff **Polyolefine**
 flex **90**
 last **100/102**

The softer of the two, this ski boot packs all features of its younger sister but does it with more style and comfort. Technically still on the stiffer side, it provides a generous influence on handling and precision for the intermediate to advanced skier looking to cut into the snow.

ELITE 90

3X022

We built this boot like a weapon. Its impenetrable outer shell will endure all the accidental bumps and bruises while the interior will take a snug hold of one's foot. It was made to be efficient. It practically slides on foot and the magnesium buckles snap without any extra effort. And you're good to go.

Hard on the outside and soft on the inside, it is supported by an X frame chassis for incredible stability and better control on any terrain. We also fitted it with adjustable volume control to ensure a higher level of comfort. This immortal piece of hardware will last longer, no matter how many feet take it for a spin.
